

MEDILAB

Appointment Booking, Rescheduling & Cancellation Policy

Knowledge Base Category: Policies

Document Type	Customer-facing process / policy guidance
Intended Use	RAG knowledge retrieval and website reference
Version	1.0 - Assessment Dataset
Clinical Boundary	Operational information only; not clinical advice

Rules for branch appointments and home visits, including confirmations, late arrival, rescheduling, cancellation, and no-show handling.

Quick Reference

Use this document for	Do not use this document for
Stable customer-service process, policy, preparation, FAQ, and operational guidance.	Live prices, slot availability, booking status, patient-specific clinical interpretation, diagnosis, or medication advice.

1. Appointment Types

MediLab supports branch appointments and eligible home sample collection visits. Each appointment is linked to a specific visit type, date, time slot, patient, and selected tests or package.

Current slot availability must come from the booking system. Customer service must not infer availability from old messages, static documents, or hidden database rows.

2. Booking Confirmation

A booking is confirmed only after all required fields are validated and the system successfully commits the reservation. The booking reference returned by the system is the authoritative confirmation.

A draft, pending action, or uncommitted request is not a confirmed booking. Customer-facing responses must not claim success before the database transaction succeeds.

3. Branch Appointment Changes

Branch appointments may be cancelled or rescheduled up to 2 hours before the scheduled appointment time under the standard MediLab policy. A new time is subject to live availability.

If the patient requests a change inside the policy window, the system should release the old slot only after the cancellation or rescheduling transaction succeeds. Repeated confirmation messages must not create duplicate reservations.

4. Home Visit Changes

Home collection visits may be cancelled or rescheduled up to 4 hours before the scheduled slot under the standard MediLab policy. A replacement visit is subject to service area and capacity availability.

A cancellation request must target the correct booking reference. If more than one active booking could match the request, customer service should clarify rather than guessing.

5. Late Arrival at a Branch

Patients who arrive late may still be accommodated when capacity allows, but service at the original time is not guaranteed. Depending on workload and test requirements, the patient may be asked to wait or choose another available slot.

Customer service should not promise queue priority or immediate service without live branch confirmation.

6. No-Show

A booking may be marked as no-show when the patient does not attend the branch appointment or cannot be reached for a home visit within the applicable service process.

A no-show does not automatically create a replacement booking. The patient must select and confirm a new available slot.

7. Duplicate and Repeated Requests

The booking system uses idempotency and validation controls to reduce accidental duplicate bookings. Repeating the same confirmation or retrying after a network issue should not create multiple reservations when the same idempotency context is used.

If duplicate active bookings are suspected, customer service should identify the correct references before cancelling anything.

8. Branch Closure or Operational Disruption

If MediLab cannot provide a confirmed appointment because of an operational disruption, affected patients should be offered the approved alternatives available at that time, such as rescheduling, another branch, or an eligible home visit.

Operational disruptions should be communicated factually. Do not invent a cause or restoration time that has not been confirmed.

9. Payments and Refunds

Where a service fee applies, refund handling follows the current MediLab billing and refund policy. Prices, fees, and payment status must come from the structured billing or booking record rather than this policy document.

Customer service may explain the refund process, but should not create or promise a refund that has not been authorized and recorded.

10. Escalation

Escalate when the booking record is inconsistent, the requested cancellation could affect the wrong patient or booking, the system reports a transaction error, or a customer disputes a charge or service outcome that cannot be resolved from the available records.

Document Control Notes

- This is a fictional MediLab assessment document designed to resemble real diagnostic-laboratory customer-service documentation.
- If a live structured record conflicts with this document, the structured record controls for price, availability, booking, status, and test-specific catalog values.
- If a future policy changes, update the KnowledgeDocument version and reindex the RAG corpus so stale chunks are removed.
- Customer service must not use this document to diagnose, clinically interpret results, prescribe medication, or recommend medically necessary tests from symptoms.
