

MediLab AI - RAG Knowledge Corpus Index

This index defines the initial PDF knowledge corpus for customer-service RAG. The PDFs contain stable process/policy knowledge. Live business facts remain in SQL.

PDF	RAG Category	Primary Questions Covered	Authoritative Boundary
01 Patient Test Preparation and Specimen Collection Guide	Preparation	Customer-facing instructions for preparing for laboratory testing and providing common specimen types safely and consistently.	RAG for stable guidance; SQL for live price/availability/status/IDs.
02 Home Sample Collection Service Policy	Services	Operational policy for booking, preparing for, and completing home sample collection visits.	RAG for stable guidance; SQL for live price/availability/status/IDs.
03 Appointment Booking Rescheduling and Cancellation Policy	Policies	Rules for branch appointments and home visits, including confirmations, late arrival, rescheduling, cancellation, and no-show handling.	RAG for stable guidance; SQL for live price/availability/status/IDs.
04 Results Delivery Turnaround and Report Access Guide	FAQ	Explains how laboratory results are released, how turnaround time is defined, and what customer service can and cannot say about reports.	RAG for stable guidance; SQL for live price/availability/status/IDs.
05 Specimen Acceptance Recollection and Quality Exceptions Guide	Processes	Customer-facing explanation of why a laboratory specimen may be rejected or require recollection and how the issue is handled.	RAG for stable guidance; SQL for live price/availability/status/IDs.
06 Patient Identification Privacy and Authorized Access Guide	Policies	Operational rules for identity verification, result access, authorized representatives, and privacy escalation.	RAG for stable guidance; SQL for live price/availability/status/IDs.
07 Customer Service Complaints Refunds and Escalation Policy	Customer Service	A structured policy for handling service questions, complaints, billing concerns, refunds, and escalation while preserving clinical boundaries.	RAG for stable guidance; SQL for live price/availability/status/IDs.

Recommended Ingestion Metadata

For each PDF, store source filename, title, category, document version, active status, ingestion timestamp, and chunk provenance. Keep current test-specific price, availability, booking IDs, and patient-specific state out of RAG.

Current Architecture Note

The existing MediLab Phase 2 pipeline indexes KnowledgeDocument text from PostgreSQL. These PDFs can be published as website references and used as source content, but automatic PDF parsing/upload is not part of the current architecture. To index them today, copy/import their approved text into KnowledgeDocument records and run the existing reindex flow.
